Specimen Received:
T2435/21:

Report:

T2435/21:

Sections examined show 4 bone core biopsies exhibiting different morphology with presence of irregular lamellar bone along with mature chondroid tissue in the inter-trabecular spaces showing focal pericellular calcification and enchondral ossification. Also seen are interspersed and separately lying stromal mesenchymal tissue bit showing atypical cells which are ovoid to spindle shape having irregular, hyperchromatic nucleus & eosinophilic cytoplasm. Occasional mitotic figures are also noted. Focal increase in cellularity along with bizarre cells lying in lacunae are noted in the cartilagenous area.

Impression:

T2435/21:

Features are consistent with morphology of osteosarcoma, right proximal tibia, in view of the associated radiological features.
